Embryology Of Behavior The Beginnins Of The Human Kind ...

Gesell and Amatruda have brought together the known facts about the behavior of the fetus and added their own observations. From the study of prematurely born infants they have learned much about the normal growth patterns before birth and their relations to the behavior of the normal infant born at full term.

The Embryology of Behavior: The Beginnings of the Human ...

In the first nine chapters the beginnings of behavior are traced. Here an enormous literature is digested and organized into a fascinating account of the development of the embryo and of the structure and behavior of the fetus. The primitive motor system, breathing, behavior and muscle tone are discussed.

It's actually called the primitive streak, and the formation of the primitive streak marks the beginning of the next stage of early embryogenesis, and that's called gastrulation. Now what that primitive streak actually is is just the site where the cells in this epiblast layer of our bilaminar disk start to migrate.

In the past, the development of behavior in vertebrate embryos has been interpreted in terms of two opposing viewpoints. Coghill, on the basis of his observations on the salamander *Ambystoma*, has maintained that behavior represents an integrated pattern from beginning to end; partial patterns segregate from total patterns by a developmental process which he calls "individuation."
