felt as a mass under the ribs on the right side. An enlarged spleen, felt as a mass under the ribs on the left side.

Signs and Symptoms of Liver Cancer

Liver cancer (hepatoma) is a general term that refers to both primary (liver cells) and secondary (metastatic cells from other organs) that form abnormal collections (tumors) of cells in the liver.

Unfortunately, the signs and symptoms of liver cancer(s) are non-specific and are as follows: weakness, fatigue, weight loss.

Liver Cancer Symptoms and Signs: Causes

Unfortunately, most people with liver cancer will not have any symptoms during the early stages of the disease, and people may not realize they have liver cancer until the tumor becomes large and difficult to treat.

Normally, it is not possible to feel your liver, but if a person has liver cancer, the liver may become enlarged and swell.

What are the Symptoms and Signs of Liver Cancer? | CTCA

Liver Cancer Symptoms to
Watch For. Your liver is one
busy organ. It's an
efficient filter that cleans
the blood of harmful
substances and sends these
substances to be processed
as waste, creates bile which
helps you digest fat, makes
proteins for your body, and
stores sugar for the energy
you need later.
